

Which materials should you use?

Design a sailing ship

- Choose **materials** for each part of a sailing ship and write your choice in the right box. You can use more than one **material** for a part if needed.
- When you've finished, **colour and decorate** your ship and add any other features you want it to have.

Cabin- This is where the sailors will shelter from the weather and steer the ship.

Mast- This will hold the sail to the ship. It will have to withstand a lot of force.

Hull- This is the part that will float in the water.

Sail- This will have to fill up with air as the wind blows. It must be flexible and lightweight.
