

The International Space Station was first launched in 1998.

It's up there, travelling right round the world, once every 92 minutes. A floating monument to what we can achieve when we work together. 239 people from 19 countries have called it home over the years.

Scientists and Astronauts; living, working, learning together. A love that life in space can teach us so much about living down here.

In a village in Africa, the people were starving, so they turned to sustainable farming. Look after the land and cultivate crops, so that they can grow enough food.

In a town, the people were thirsty, and though the drought is long and hard, there is enough water, in the well they built.

Rubella returns and many children are sick, but this time, there are doctors, medicines, hospitals.

This could be any place. The global community helps to provide tools and resources for sustainable farming. And shares technology and 'know how' to make sure the Rubella outbreak is contained this time.

When we support each other no one goes without and no one is stuck trying to figure out the answer on their own.

That's what partnership is all about.

We all live under the same sky.

If one country promises to stop climate change, great! But if every country makes the same promise, that makes a difference.

See? A partnership is more than a sum of its parts.

Think of a band, each person brings something unique. Not just instruments, but sounds, ideas, thoughts, feelings, experiences. When it's put together, then, you get music.

Human beings just are better together, collaboration is in all the things we do.

Why wouldn't we work together to make the world a better place?

I think whenever we are faced with something in life the most difficult part is not the problem itself, it is in learning to work with other people and appreciating the value that they bring.

It is in being quick to lend a hand and grateful to accept help.

It is in overcoming preconceptions we have about other people and welcoming them into our lives.

The ISS watches over the world, our home. It sees everything we do, everything we are and everything we have been. It watches our great

achievements and will be there, in the skies above as we go on to achieve much more.

A fair, equal, sustainable world. Where everyone gets the same opportunities and no one is left behind.

A unique, beautiful world, teeming full of life.

All together.
