

## Nursery rhymes

Singing songs at home helps to develop communication skills.

### Remember

**It's never too early to start learning. 70% of babies' brains develop in the first year of their life.**

### Singing songs at home

Babies and children love hearing songs at any time of day, so try singing songs

- At bath time
- In the car together
- When you're hanging out the washing
- When you're changing a nappy

## Singing songs together

Singing songs can be a great way for babies and their older siblings to **play together**.

Help older children **make eye contact** with babies while they sing; it will help them to develop their listening skills.

Singing **with actions** can help babies to understand what different words mean.
