

Wild and garden plants

Match the plants

Plants are living things that grow in soil and need water, sunlight and air to survive in our gardens or in the wild. We can group them in four ways:

- garden plants
- wild plants
- deciduous trees
- evergreen trees

Below are lots of different plants. **Draw lines** to match the plants to their description, some can fall in multiple categories.

Deciduous trees

Garden plants

Wild plants

Evergreen trees
