

Mutations: soft, nasal and aspirate

Treigladd meddal - Soft mutation

Now I'm going to tell you about the most common mutation, **y treigladd meddal**.

There are 9 letters which change, and my advice is:

Don't be soft
take the time
to remember the nine!

OK so we know which letters change and what they change into, so when does this happen?

First of all when we describe things.

So if we wanted to describe this tortoise for example.

Mae e'n wyrdd.

Mae e'n fach.

Next, we use it after 'two' of something, **dau**, masculine, or **dwy**, feminine.

Bachgen.

Dau fachgen.

Merch.

Dwy ferch.

There are many more occasions when we use the soft mutation but that's plenty for now.

Remember:

Don't be soft
take the time
to remember the nine!
