

GCSE Bitesize Computer Science

Ivo Jansch on pseudocode

My name is Ivo and I work at Egeniq. We build mobile apps for iPhones and iPads and we're currently working on a number of applications for television watching, so apps that you would use while you're watching TV.

So I use pseudocode to analyse a problem. When I want to explain a problem to another developer, I can show him the code, but maybe this developer codes in a different language. Pseudocode is a way to express my programming without diving into the actual language. I can just write up a few fake statements that make up some pseudocode and show that and any programmer would understand it.
