

Video transcript for 'Electricity'

Seymour: Hello! Seymour Science here on a very special science sleepover with my guest... Eddie!

Eddie: Thanks Seymour! Electricity is amazing. Lots of the things around us are powered by it: lights, phones, TVs...but electricity can be dangerous too. I'm here to give you some top tips for staying safe!

Seymour: One...

Eddie: Always ask for help! Now I know it seems easy to use the toaster, but always ask for help from a grown-up...

Seymour: they've been making toast for years!

Eddie: Same goes for all appliances actually. Even Seymour asks for help...

Seymour: and I'm the smartest kid around!

Eddie: And if your toast gets stuck, never stick anything into the toaster to get it out... just ask a grown-up to help.

Seymour: Two...

Eddie: Watch those drinks! If you spill a drink on any appliance or plug it can be really dangerous, so put your drink somewhere safe. Oh and tuck away any wires... you don't want someone tripping up and interfering with your favourite TV show!

Seymour: Three...

Eddie: Water and electricity aren't friends! Electricity doesn't like any kind of water. So keep those electric appliances out of the bathroom — just sing instead!

Seymour: La la la la la la laaaa

Eddie: Or maybe not!

Seymour: Four...

Eddie: Dry those hands! If you've had a bath, washed your hands or brushed your teeth, always make sure your hands are completely dry before using light switches, or plugs or anything electrical.

Seymour: And our final tip... Five...

Eddie: Don't stick things in plug sockets! It's really dangerous to stick anything into a plug socket... except a plug of course!

Mum: Seymour, Eddie! Are you still awake?

Seymour: Oops, time for bed!
