What are electrical circuits?

1. Create your own **circuit.**

2. **Remember:** It needs a **power source** (like a battery) to start with, from there you can add any of the **components** in the **box below,** they must all be connected by **wires** to work.

3. Can you make a **circuit** that uses all of the **components?**

Battery	Wire	Bulb	Buzzer
Motor	Switch (off)	Switch (on)
